Servlet And JSP Programming With IBM WebSphere Studio And VisualAge For Java (IBM Redbook)

Synopsis

This IBM Redbook provides you with sufficient information to effectively use the WebSphere and VisualAge for Java environments to create, manage and deploy Web-based applications using methodologies centered around servlet, JavaServer Pages, and JavaBean architectures. In Part 1 we describe the products used in our environment and provide instruction on product installation and configuration. Following this, we cover servlet and JSP programming, which provide you with both a theoretical and practical understanding of these components, together with working examples of the concepts described. For execution of the sample code, we provide information on configuring the WebSphere Application Server and deploying and running the sample Web applications in WebSphere. Using the knowledge developed in these chapters, we then provide detailed information on the development environments offered by VisualAge for Java and WebSphere Studio. These chapters assist you in using the features offered by these tools, such as integrated debugging, the WebSphere Test Environment, Studio Wizards, and publishing of Web site resources. We also describe how Rational's ClearCase product can be integrated with our environment for Software Configuration Management. In Part 2 we describe the Pattern Development Kit sample application, including installation, configuration, and operation. We also discuss the application's use of Patterns for e-business, which presents information on some of the design decisions employed when creating the application. This IBM Redbook is intended to be read by anyone who requires both introductory and detailed information on software development in the WebSphere environment using servlets and JavaServer Pages. We assume that you have a good understanding of Java and some knowledge of HTML.

Book Information

Paperback: 474 pages

Publisher: Ibm (May 1, 2000)

Language: English

ISBN-10: 0738416088

ISBN-13: 978-0738416083

Product Dimensions: 1.2 x 7 x 8.8 inches

Shipping Weight: 1.8 pounds

Average Customer Review: 3.5 out of 5 stars [See all reviews](#) (2 customer reviews)

Best Sellers Rank: #13,215,531 in Books (See Top 100 in Books) #66 in [Books > Computers & Technology > Programming > Languages & Tools > Java > Servlets](#) #99 in [Books > Computers](#)

& Technology > Programming > Web Programming > Java Server Pages #38095 inÂ Books > Computers & Technology > Web Development & Design

Customer Reviews

As a recommended resource for gaining the WebSphere Application Server (WAS) Standard Edition certification at IBM, this book is ok. Although one might expect IBM to upgrade it very soon to the latest editions of their software, it is still useful as it covers the way Visual Age and WebSphere Studio is brought to play with WebSphere Application Server. Don't expect miracles though

This redbook gives a thorough overview of the software products required to build an entire Websphere based web solution. This includes Websphere App Server, Websphere Studio, Visual Age for Java, DB2, and SecureWay. It gives numerous detailed examples taking you through servlets, JSPs, and interactive web sites. Towards the end it introduces the Patterns Development Kit. (This topic is covered in detail in redbook SG24-5864-00.) This gives sample architecture and a strategy for selecting the one for a given application given its needs. It provides a good sized application with full source code and explanation showing you a best practices for building sites in this environment. The only drawback is that it could use an update for today's more recent versions of the software. Despite that, the installation instructions and sample code are easy to install and follow. It's a permanent part of my library.
