Oracle8i Java Component Programming With EJB, CORBA AND JSP

Synopsis

This is a guide to developing Java component-based applications for the Oracle 8i database. The reader can learn about Java and SQLJ programming languages and how to deploy these components.

Book Information

Series: Oracle Press

Paperback: 693 pages

Publisher: McGraw-Hill Companies (September 27, 2000)

Language: English

ISBN-10: 0072127376

ISBN-13: 978-0072127379

Product Dimensions: 9.2 x 7.3 x 1.8 inches

Shipping Weight: 3.2 pounds

Average Customer Review: 3.9 out of 5 stars [See all reviews](#) (10 customer reviews)

Best Sellers Rank: #9,876,621 in Books (See Top 100 in Books) #54 in [Books > Computers & Technology > Networking & Cloud Computing > Networks, Protocols & APIs > CORBA](#) #90 in [Books > Computers & Technology > Programming > Web Programming > Java Server Pages](#) #633 in [Books > Computers & Technology > Databases & Big Data > Relational Databases](#)

Customer Reviews

Basically this is the only book available that deals with EJB and Oracle Application Server. But the book is outdated. Basically handles only EJB1.0 spec, so the deployment descriptors are old. It does not cover Entity Beans. So if you are using Oracle 8.1.7 or Oracle 9 i App Server, this book is out dated for you. The flow of topics could have been better. Any way we dont have much choice, as this is the only book on this topic.

Last year, I found the Oracle8i SQLJ Programming book (by Morisseau-Leroy, Solomon, and Momplaisir) while surfing for a book on SQLJ. I must say that the Oracle8i SQLJ book is an excellent book indeed, and the ONLY worth reading book on SQLJ. When, I saw on .com the advertising about the Oracle8i Java Component Book (by the same authors), I quickly purchased it. So far, I have read the first three chapters. The first chapter two chapters introduce the concepts of component-based applications using JDBC and SQLJ and Web applications, while the third one takes you straight in EJB. A note of caution, the Oracle8i Java Component Book is an advanced

book on component concepts and assumes that the reader knows SQL, PL/SQL, Java, JDBC, SQLJ, and Oracle database. Extremely informative. I strongly recommend this book.

This is a truly outstanding book on Enterprise JavaBeans, CORBA, and JavaServer Pages as they appear in the Oracle8i environment. However, this book is written so as to be useful in other environments as well. The treatment in this book is based on the presentation of detailed and clearly written examples that teach the reader how to implement and use the Java components. The book starts out with two clearly written chapters that introduce distributed components and Web processing, respectively. This is followed by three chapters on EJB, four chapters on CORBA, and three chapters on JSP. The book is filled with necessary information on how to work with the Oracle8i implementation of CORBA, EJB, and JSP, including information on caveats and bugs that you won't find in the manuals. According to her author bio, Julie Basu is the person who actually implemented the Oracle8i version of JSP, so that we are getting the information straight from the horse's mouth. If you want to avoid frustrating hours spent in trying to use these systems on Oracle8i, I highly recommend buying this book.

I just purchased the Oracle8i Java Component book. This book is a real asset for a nay serious Java programmer that wishes to learn how to develop component-based applications using JDBC and the new kid on the block : SQLJ. Caution. Do not go too fast into the book; it covers fundamental concepts and high-level applications in Java. I can only diggest a few chapters at a time. It's an excellent tutorial and an excellent reference manual for Oracle DBAs as well as Oracle application Developers. I highly recommend this book.

This book is a pathetic attempt at providing information on Java side of Oracle8i. It does complete injustice to its title. One has to search hard to find as to what is there in this book about Oracle8i with regards to Java. Rather this book is a mediocre introduction to HTML, Web, EJB, CORBA, JSP and so on. There are outstanding books on each of these topics. I wonder if the authors and the publisher chose this title to gain entry into the otherwise saturated market for books on Java. If you are planning to buy this book , wait until the price drops down to \$5.0 a piece. I am returning mine for a refund.
